SpliceCom Release Version 3.1 for maximiser

13th June 2006 - Chorleywood, UK: SpliceCom, the IP convergence company whose **maximiser** platform combines voice, video and web enabled IT applications, has released Version 3.1 software for its award winning product range.

"Version 3.1 for **maximiser** is our most significant software release to date," says Sean Harding, SpliceCom's Managing Director. "We've always believed that "Enterprise Class" features can benefit all companies, irrespective of size. As such, we've made it our goal to deliver high-end functionality in a manner that is both cost-effective and easy to deploy, manage and use for small and medium sized businesses. The distributed and scalable pure IP architecture of **maximiser** allows us to add such features in an integrated manner rather than deploying external application servers. It's here that we make great saving in terms of cost and complexity, benefiting both our channel and their customers," concludes Harding.

Version 3.1 for **maximiser** adds support for SIP terminals and trunks and Unified Messaging to SpliceCom's range of business telephony platforms. Time saving facilities like Queue Buster - which allows a caller to leave a queue and be called back automatically when they would have reached the top - and Call Back When Free - which works independently of the location of the calling and called parties are supported through SpliceCom's Enhanced Speech Processing (ESP) application. The entry-level cost of the 4140 Remote Call Server becomes even more competitive through the addition of an 8 channel PRI licence, whilst the introduction of the 4400 Voice Compression Module means there's no limit to the number of 8 kbps G.729 channels that can be dynamically added as and when required - unlike certain other hybrid switches which employ "blocking" architectures.

In addition to **maximiser**, SpliceCom's Voice Processing application, PCS 400, PCS 100, PCS 50 and the PCS Operators Console have all had significant new features and enhancements added to them. In total Version 3.1 for **maximiser** contains nearly 100 new features and enhancements. Available with immediate effect, Version 3.1 for **maximiser** is provided Free of Charge for existing SpliceCom customers.

Notes for Editors

SpliceCom is a privately funded company, whose management team were behind the two most successful UK voice and data convergence companies of the 1990's - SDX Business Systems and Network Alchemy. SpliceCom's **maximiser** product family combines voice, video and web enabled IT applications within a single system, providing tangible business benefits for all types of companies, irrespective of their size. Having commenced shipments in early 2003, **maximiser** was voted the "Most Innovative Product" at one of the UK's premier communications trade events, Comms Channel Expo 2004, whilst SpliceCom's PCS 50 for Mac OS X IP Softphone/Phone Partner application picked up the award in 2005.
